

Arturs Blazevids

Senior and Lead Software Developer

Riga, Latvia
arthur.blazhevich@gmail.com

Product-oriented Backend and Game Developer with 14 years of experience of creating and optimizing mobile games and backend solutions. Proven expertise in elevating technical standards, architecting scalable and performant solutions, and leading development teams through mentorship and hands-on engineering in a startup environment. An expert in performance optimization and full-stack gameplay development, from backend services to client-side Unity programming. Deep understanding of the mobile gaming market and technologies that power it.

TECHNICAL SKILLS

- **Backend programming:** C#, .NET Core, EF Core, DB
- **Client programming:** Unity3D, C#
- **Logging and observability:** MEL, Serilog, Sentry and Grafana with Loki
- **Networking:** REST, gRPC, TCP, WebSockets
- **CI/CD:** Jenkins, GitLab
- **Core Competencies:** Backend development, Client development, Game development, API programming, Networking, Cloud computing, Performance Optimization, Project Architecture, Automated Testing, LiveOps & A/B Testing, Team Leadership and Mentoring

PROFESSIONAL EXPERIENCE

Lead Developer at Kolka Games (2024 - 2025)

Led the development of "Wizario" mobile game, published by SandSoft.

- Backend programming
- Optimized a very content heavy product to acceptable KPIs
- Created and implemented an **Automated testing framework**
- Project architecture setup and maintenance that achieved **scalable content growth**
- Sophisticated **asset pipeline** with pre-build steps, that balances usability and runtime performance
- Implemented an on demand loading system for scalable assets
- Conducting code **reviews** and **mentoring**
- Implemented and enforced **automatic code formatting setup**
- **SDK** and **backend service** integration

Technologies used: .NET, EF Core, Unity, ZLogger/ZString/Microsoft.Extensions.Logging, Sentry

Lead Developer at OFC (2022 - 2024)

Supporting an existing codebase of a Poker type multiplayer card game while doing a complete rewrite. Being a high stakes poker type game, the project focused on extreme stability, maintainability and observability. I was leading a team of 5 developers, maintaining backend and client architecture and implementing backend and gameplay systems.

- **Backend** programming with **Server-side authoritative** logic
- Lead **technical pre-production**
- **Scalable** and **performant** project architecture setup and maintenance
- Reliable **server-client communication** using gRPC and REST
- Conducted **code reviews** and **mentored junior developers**
- Organized **daily meetings** and handled communication with stakeholders
- Optimized **load times** and **memory footprint**
- Integrated **CI/CD** and **deployment** pipeline

Technologies used: .NET Core, EF Core, Unity, ZLogger/ZString/Microsoft.Extensions.Logging, Sentry, MagicOnion(gRPC/Websockets)

Senior developer at FunGenerationLab (2017 - 2023)

Working on many mobile games in different genres, from Real-time strategies, Golf Simulators, Spa management games to Social Casinos and racing simulators. My responsibilities were mostly focused at but not limited to architecture, tooling, performance optimizations, R&D, LiveOps, development frameworks, client-server communication, backend programming. Published by Lion Studios.

- **Technical pre-production** and **architecture** setup for every product
- Optimized **load times**, **FPS** and **memory footprint** in products of different genres and complexity
- Built an in-house **asset delivery solution** with seamless **DLC**(before Addressables)
- Implemented **Addressables** build pipeline with local and **DLC** asset isolation
- Research and development of **new frameworks** and technologies.
- Implemented different UI and logical event systems(UI data frameworks and animation queues)
- **SDK** and **plugin** integration
- Created an **Automated testing** framework for daily and pre-release tests
- Implemented in-house **LiveOps** systems with in-game event and tournament support and A/B testing systems both on client side and **backend**
- Created large variety of **Editor tools** for asset import pipelines, level editing, config data aggregation
- Implemented and supported **CI/CD** pipeline on Jenkins with one click deployment
- Gameplay programming

Technologies used: .NET Core, EF Core, Unity, REST, MagicOnion(gRPC)

Unity Developer at Game Insight (2013 - 2017)

Working on city building and farm simulator games. First ever city building game in AR (My Country AR). Worked on the official mobile game of **Disney's Moana** animated movie in close cooperation with Disney.

- **Research and development** of new technologies and frameworks
- **Automated testing framework** with testing on save file of existing players
- Implemented **Scripted animated sequence framework** for animation heavy products
- In-person meetings and communication with developers of Unity3D Game Engine
- Gameplay programming

Unity Developer at TSG Studio (2011 - 2013)

Small start-up game development studio. Several hack-and-slash types of games and MMORPG.

- Gameplay programming
- Networking implementation using uLink
- Communication with artists
- Developed asset integration pipelines for animations and FBX models

EDUCATION

Riga Technical University, Aviation Institute (2008 - 2012)

Riga State Gymnasium No.1 (2005 - 2008)

LANGUAGES

Russian, Latvian - native, **English** - fluent
